SUMMARY

QA Automation Engineer with 4+ years of experience in Selenium, Java, Web application testing and API testing across insurance and telecom domains. Skilled in designing and executing automated and manual test cases, validating REST APIs, performing database testing using MySQL, and supporting CI/CD pipelines with Jenkins. Proven ability to improve test coverage, reduce regression effort by 40%, identify critical defects before production, and collaborate effectively with cross-functional teams to deliver high-quality software.

TECHNICAL SKILLS

- Languages: **Java**
- Automation: **Selenium, TestNG**
- API Testing: **Postman, Insomnia**
- Methodologies: **Agile, Waterfall**
- Database: **MySQL**
- Version Control & CI/CD: **GitHub, Jenkins**
- Test Management Tools: **Rally, Jira**
- Testing: **Manual, Functional, Regression, Integration, End-to-End (E2E), Smoke, Exploratory, UAT**

PROFESSIONAL EXPERIENCE

Quality Assurance Tester, A for Analytics (Part-Time)

Aug 2026 - Present

- Working as a QA Engineer on a **SaaS-based product**, performing functional, regression, integration, and end-to-end testing across **10+ core modules** and user workflows.
- Designed and executed 100+ test scenarios, identified and investigated edge cases, and reported **40+** functional and usability defects in Linear while collaborating with the team to validate fixes and improve product reliability.

QA Tester, BusStop - API Test Automation (Freelance)

Feb 2026 - Present

- Performed beta testing for an API testing platform by validating application features, usability, and API workflows.
- Identified **40+** functional defects, verified API request-response behaviour, and documented reproducible issues.
- Worked directly with the client to provide feedback that improved application quality and usability.

Software QA II, Apptium Technologies

Aug 2025 - Feb 2026

- Executed and validated **100+** backend REST API test cases using Insomnia for broadband and digital services app.
- Verified API request-response accuracy, reducing functional defects during testing cycles.
- Designed and executed API test cases to validate critical business workflows.
- Identified, logged, and tracked **20+ functional defects**, collaborating with developers for timely resolution.
- Participated in bi-weekly sprint cycles, providing status updates and submitting progress reports in daily meetings.
- Prepared test reports and maintained complete requirement-to-test traceability for release validation.

Programmer Analyst, Cognizant Technology Solutions

Oct 2021 - Aug 2025

- Automated web test cases with Selenium and Java, reducing manual effort by **30%** and regression time by **40%**.
- Designed and executed **500+ manual and automated test cases** per release.
- Performed functional, regression, and ad-hoc testing covering 90% of critical application features.
- Achieved **80% first-time pass rate** by running Jenkins pipeline tests and updating fixes in GitHub.
- Enhanced application reliability by identifying and addressing **100+ critical defects** before production release.
- Collaborated with developers and Business Analysts to improve test quality.
- Performed backend data extraction and database validation using MySQL queries.
- Mentored a team of 5 QA engineers and trained new team members on framework design and GitHub workflows.

EDUCATION

MA, Psychology

Indira Gandhi National Open University

2022 - 2024

BSc, Actuarial Mathematical Science

Bishop Heber College, Trichy

2018 - 2021

ADDITIONAL INFORMATION

- **Certifications:** HackerRank Java (Basic), HackerRank SQL (Basic)
- **Languages:** Tamil, English, Hindi, Sanskrit
